

# FOOT-AND-MOUTH DISEASE (FMD)

## Precautionary measures

Outbreaks of the highly contagious foot-and-mouth disease (FMD) have been reported in Hungary and Slovakia, just a few kilometres from the Austrian border. The viral disease affects cloven-hoofed animals such as cattle, sheep, goats, pigs, alpacas, llamas and wild animals. FMD is a notifiable animal disease. If this disease occurs on a farm, all cloven-hoofed animals must be killed by order of the authorities.

Please help us to keep our animals healthy:

**Avoid any contact with our animals.**

**Do not feed our animals under any circumstances.**

**Do not enter the stables or the animal enclosure.**

**Do not bring pets onto the school grounds.**

**Thank you for your understanding!**

Farmers are doing their best to protect their animals!  
**FMD is not dangerous for humans!**
