

The diagram illustrates the growth cycle of a cover crop. It starts with a green box on the left labeled 'Spätester Anbau: 10. August' with a line pointing to a small green circle above a series of orange dots representing seeds. From these seeds, a row of green plants grows across the middle of the image. The plants start as small seedlings and gradually increase in height and leaf density. Some plants have small purple flowers. Below the plants is a dark brown soil layer with small white dots. A green box at the bottom center, labeled 'Mindestbegrünungsdauer: 70 Tage', has a line pointing to the start of the plant row. To the right of the plants, a green box labeled 'Befahrungsverbot bis 14. September' has a line pointing to the end of the plant row. Further right, a green box labeled 'Frühester Umbruch nach 70 Tagen: frühestens 15. September' has a line pointing to a small green circle above a row of green grass. To the right of the grass, a green box labeled 'Zwingender Anbau einer Hauptkultur im Herbst' has a line pointing to a small green circle above a row of green grass. The background is white.

Spätester Anbau:
10. August

Befahrungsverbot
bis 14. September

Frühester Umbruch
nach 70 Tagen:
frühestens 15. September

Zwingender Anbau
einer Hauptkultur
im Herbst

Mindestbegrünungsdauer: 70 Tage
